Cyntech GPIO Splitter

Plug more on to your Raspberry Pi with this handy little board. With an additional row of GPIO pins, they can make prototyping much easier by attaching a multimeter or oscilloscope in line with a HAT compatible board, or breadboard assembly.

The GPIO Splitter is labelled with both the physical location (Board number) on the header and the BCM numbering in the middle, ensuring that the correct pin is used during prototyping.

Adding an extra header can make using the same pin, such as any of the serial connections much easier.

General Specifications

Size	56x65x15mm (W x D x H)
Net weight	22g

Operation Specifications

		Min	Typ	Max
Operating Temperature:		0c		70c
Storage Temperature:		0c		70c
Relative humidity:		5%		95%
